Team

Project Overview

Weyland-Yutani shareholders desire to understand world domination more clearly.

They have asked for an analysis of the world's international reserves to identify global financial buffers in support of investment and policy development to become a more perfect "*Global Company*."

Understanding the IMF Dataset

1

Source:
International Monetary Fund (IMF)

3

Years Covered:
2020–2023

2

Scope:
Global Financial Reserves by
Country and Indicator

4

Key Fields:
Country, Indicator, Year, Value

Preparing Data for Analysis

1

Filtered out nulls for clean queries with OpenRefine

2

Uploaded IMF CSV to Google Cloud Storage

3

Imported into BigQuery dataset ``global_reserves``

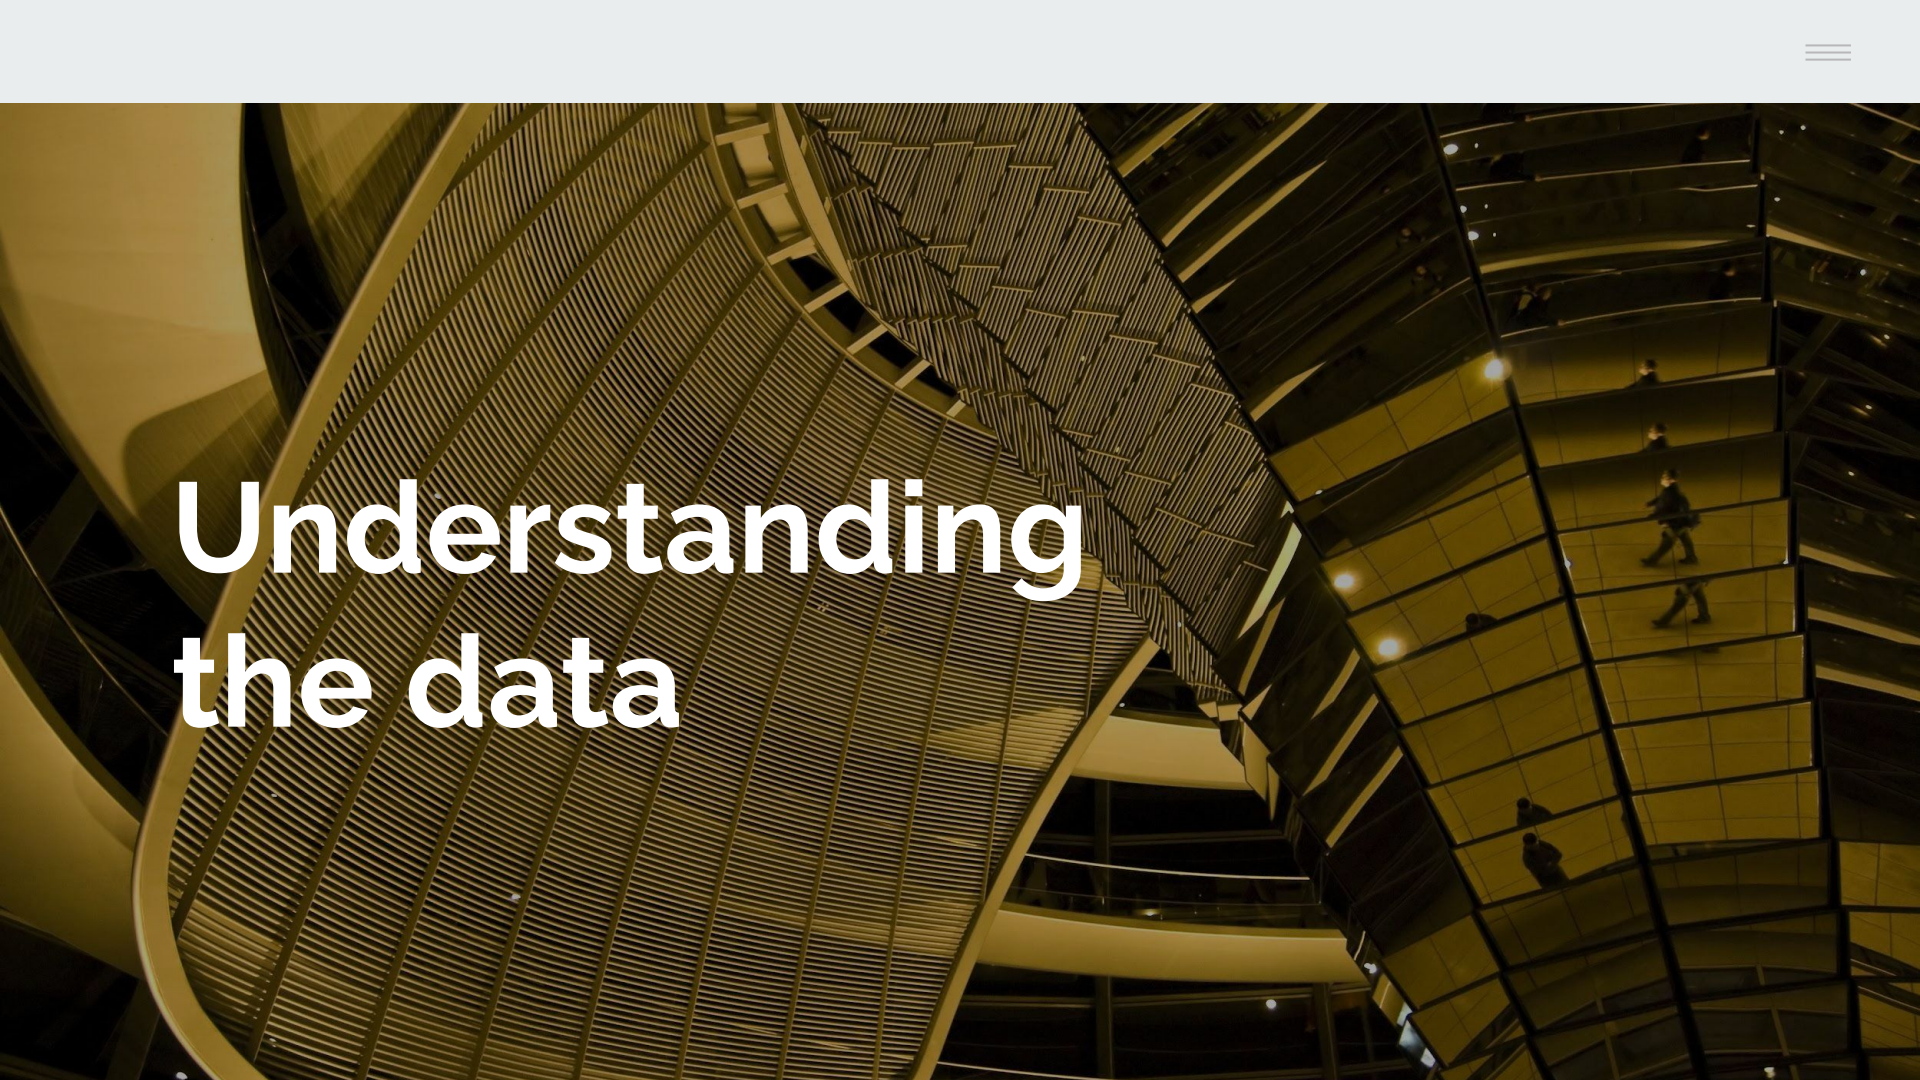

4

Reshaped data using ``UNPIVOT`` into year-value pairs

Exploratory SQL Analysis

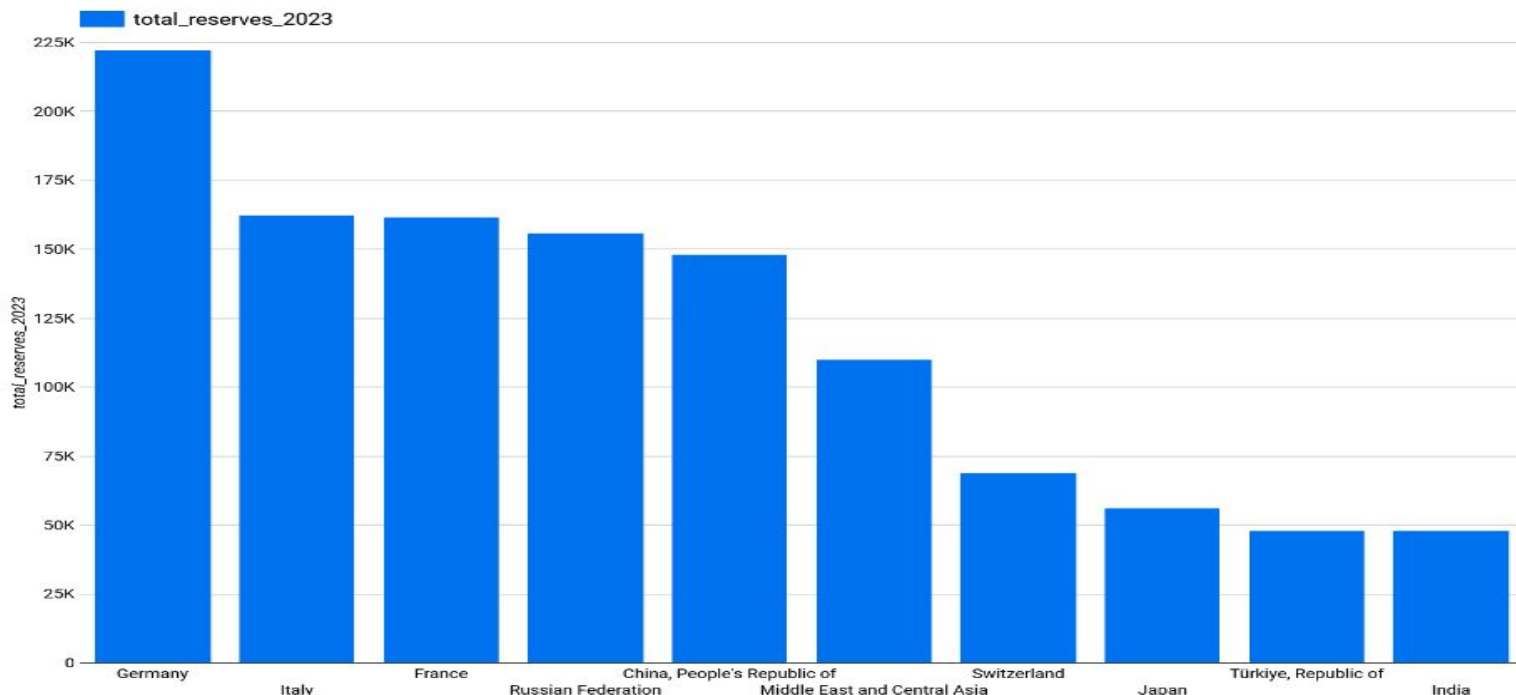

- Validated years 2020–2023 are populated in dataset
- Identified key indicators: gold reserves, foreign asset claims
- Confirmed tidy structure using SQL and `UNPIVOT`

Understanding the data

Market trends

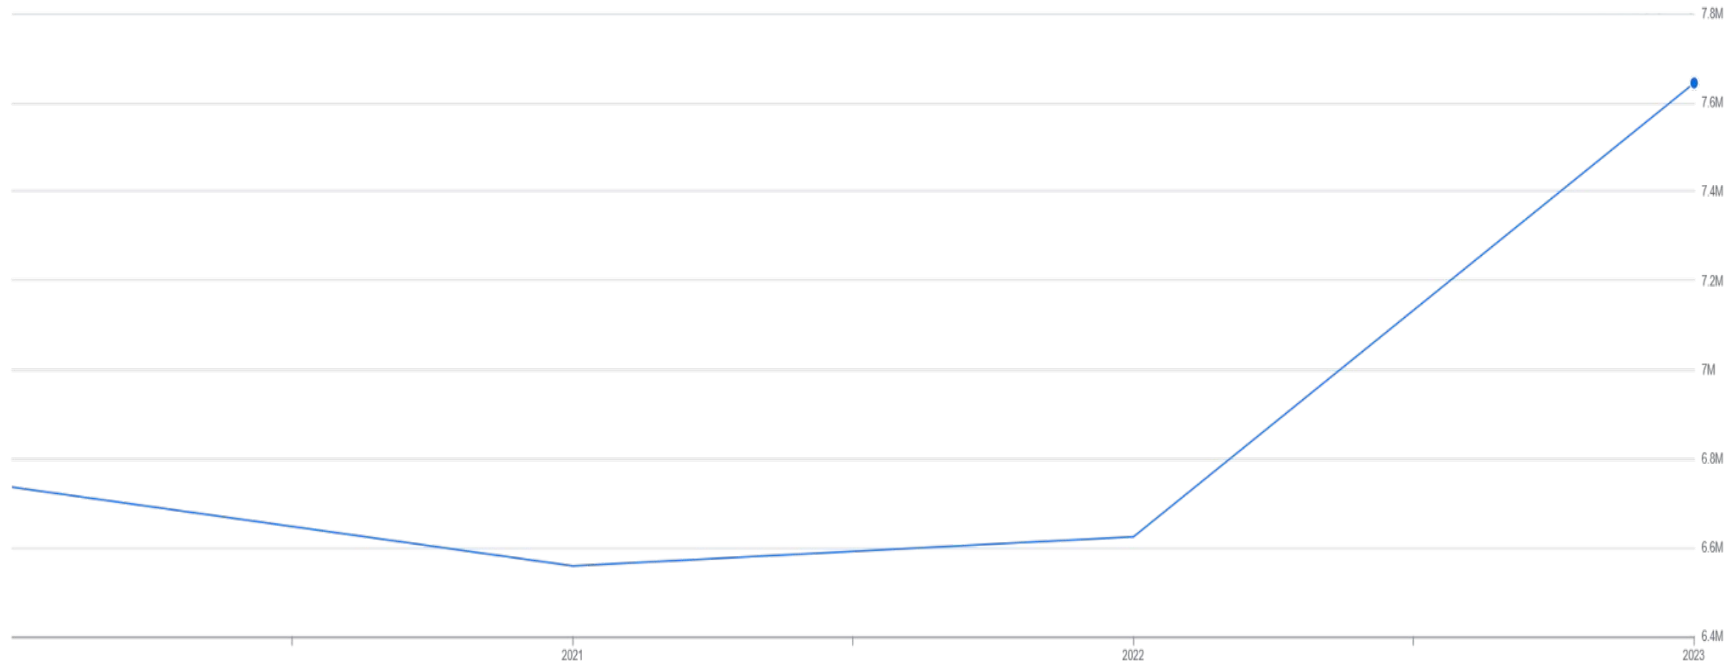

Top Reserve Holders (2023)

Market trends

Global Reserves (2020-23)

Insights

Empires of history may hold a great key to future growth as post colonialism still leaves it's mark decades later, while technology and oil still drive much of the financial markets.

- 01 | Germany, India, & France hold the greatest reserves
- 02 | East Asia & Middle East have sharpest growth levels
- 03 | Stagnation plagues Sub-Saharan Africa & Eastern Europe

Strategic Actions

1. Target regions with stagnant reserves for partnerships
2. Invest in rising economies like India & Brazil
3. Monitor reserve trends as early warning market signals

In Conclusion

This analysis leverages IMF data to guide Weyland-Yutani's global strategy with the following key takeaways:

Disaggregated reserve data
reveals national stability
patterns

Identified target regions with
strategic potential

Informed expansion, risk
mitigation, and market
positioning

"Informed expansion builds lasting dominance"
